

To whom it may concern

Your inquiry concerning the use of Asbestos in Endress+Hauser products

Dear valued customer

Thank you for your inquiry regarding **Asbestos** in Endress+Hauser products. Asbestos is a set of six naturally occurring silicate minerals. Because of its unique characteristics, it was often used as a construction material in versatile applications.

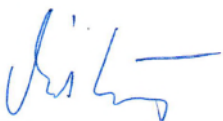

However all types of asbestos fibers are known to cause serious health hazards in humans. As a consequence asbestos is now banned in most countries.

Endress+Hauser doesn't use any asbestos in any of their products and hence we can assure you that all our products are free of asbestos.

We trust that this letter will answer your questions. Should you require any further information, please contact your local Endress+Hauser Sales Office (see www.endress.com for contact information).

Kind regards,

Endress+Hauser Group Services AG
